Project Title - AI-Powered Recruitment Automation System

AI-Powered Recruitment Automation System (Mini ATS)

Project By: Syed Zafiar

Email: syedshoaibzaffar@gmail.com

Mobile: +966-541898769

Description

Built an end-to-end AI-driven recruitment automation pipeline that scans resumes, extracts candidate information, evaluates profiles against job requirements, and automates communication with applicants.

Tech Stack

- Zapier
- OpenAI
- Google Sheets
- Google Drive
- Gmail

Features

Resume Parsing

- Automatically reads PDF resumes from Google Drive
- Extracts structured candidate data (name, role, experience, skills, etc.)

Candidate Database

- Stores all candidate data in Google Sheets

- Auto-generates serial numbers

AI Scoring System

- Evaluates candidates based on job requirements
- Generates score (0–100) and recommendation

Decision Automation

- Automatically classifies candidates:
  - Shortlisted
  - Rejected

Automated Communication

- Sends:
  - Interview emails to shortlisted candidates
  - Rejection emails to non-selected candidates

Workflow

```
Resume Upload → AI Extraction → Data Structuring → Scoring → Decision → Email Automation
```

Impact

- Reduced manual resume screening effort by **80%+**
- Enabled scalable hiring workflow
- Ensured consistent and professional candidate communication

---

What I Learned

- Workflow automation design
- AI prompt engineering

- Data structuring and transformation
- Building scalable no-code systems
